DECLARATION OF ORIGINALITY

I certify that the research entitled “Risk Failure Analysis of ID Plate Design and Process by Using FMEA at PT. Hyundai Indonesia Motor” in this thesis has not already been submitted for any other degree.

I certify that to the best of my knowledge and belief, this thesis which I wrote does not contain the works of parts of the works of other people, except those cited in the quotations and bibliography, as a scientific paper should.

In addition, I certify that I understand and abide the rule stated by the Ministry of Education and Culture The Republic of Indonesia, subject to the provisions of Peraturan Menteri Pendidikan Nasional Republik Indonesia Nomor 17 Tahun 2010 tentang Pencegahan dan Penanggulangan Plagiat di Perguruan Tinggi.

PREFACE

I wish to thank the member of my thesis helper for their consistent support, encouragement, constructive criticism, and direction during this thesis.

A huge great gratitude to Mr. B. Laksito. Purnomo as Faculty Supervisor for supporting and conducting author's research. Thank you for many suggestion and direction, which significantly improved this final thesis.

Great gratitude given to Mr. Sunaryo as Director of PT. Hyundai Indonesia Motor for give change to internship and done my thesis.

Great gratitude also given to Mr. Wahyu Awal as Head Department of Quality Assurance and author's Mentor in PT. Hyundai Indonesia Motor for his support and suggestion given during this research.

Great gratitude also given to Mrs. Hati Manager of Human Resource Department for helping author and other colleagues joining research in PT. Hyundai Indonesia Motor and providing any needs for students during research.

Author is expressing special gratitude to Mr. Kurnia Abadi as Senior Engineer of ISO and author's Supervisor for his guidance and support during research. He is always providing his free slot during working only to teach author many things with great patience.

Author also expressing special gratitude to Mrs. Silvia Wulandari as Administration of QA and author's friend's for her guidance and support by give so many data which will use for processing the data and QA Department's member of PT. Hyundai Indonesia Motor for warm welcome, every knowledge shared, and great moments during research.

ACKNOWLEDGEMENT

The author conducted the research on Failure Analysis of ID Plate Design and Process by Using FMEA at PT. Hyundai Indonesia Motor, Bekasi to fulfill partial requirement for bachelor degree of Industrial Engineering of Universitas Atma Jaya Yogyakarta

Gratitude and thankfulness is only for the Greatest God Almighty for such a graceful and opportunities in life finished the first step, universities.

The deepest gratitude for generously sharing their caring, love, wisdom and motivate goes to the author's little family, Mr. Kuswidiyantoro, Mrs. Endang Tri Cahyo Murti, Ms. Anita Widyawati, Mr. Dwi Prabowo Widya Putra, and the little Fathul Safwan Widyatmoko. Their love and dedication for author have been became main power to start, bearing, and finish this research

The author is expressing great gratitude to Mr. Dr. Drs. A. Teguh Siswanto as The Dean of Industrial Technology Faculty for his support during internship.

The author is like to deliver higherst appreciation to Mrs. Ririn Diar Astanti, D.Eng as Coordinator of Industrial Engineering International Class Study Program

Great gratitude also given to TIKI batch 2012 and TI batch 2012 for the big encourage to finish this thesis, especially Eci, Cecil, Yunita, Clara, Vero, Ave, Shendy, and Kenny.

Special gratitude also given to author's close friend, Ms. Amelia Chasanda, Ms. Rahma Prima, Ms. Endah Ambar, Ms. Tika Kusuma, and Ms. Karuna Darani for always make author feeling enjoyable during finish this research.

Special gratitude also given to author's partner and his family, Mr. Gadhang Naraiswara, Aunty Lin, Ms. Raras, and the little Tegar for always make author light-hearted and always being in good spirit when author finish this research.

At last, hope this internship report will be useful and give benefit for the readers.

ABSTRACT

The purpose of this research is to present the application of failure mode and effect analysis (FMEA) to an automotive industry especially focuses on small part that produced by PT. HIM that called Identification Plate (ID Plate). ID Plate is an important item in abroad production that has function to give information for customer about the engine number, chasis number, and other information which is important. FMEA has been used as a decision making tool to prioritize the failure modes by reducing failure rate called as risk priority number (RPN) especially focuses on FMEA design and process type. Both design and process will be develop until take the recommendation action and recalculate became RPN value. The research results indicated the action that lead to decrease RPN value and decrease failures mode occur by comparing observation result and RPN value before and after implementing. The real observation also have been gained as a result of implementation to continue in recalculating run values. The contribution of the researchers are original and valuable.

Keywords: Identification Plate (ID Plate), Failure mode and effect analysis (FMEA), Risk priority Number (RPN), Implementation

Pembimbing 1 : B. Laksito Purnomo, S.T., M.Sc.
