PLAGIARISM STATEMENT

This thesis was written by me and in my own words, except for quotations from published and unpublished sources which are clearly indicated and acknowledged as such. I am conscious that the incorporation of material from other works or a paraphrase of such material without acknowledgement will be treated as plagiarism, subject to the custom and usage of the subject, according to the University Regulations on Conduct of Examinations. The source of any picture, map or other illustration is also indicated, as is the source, published or unpublished, of any material not resulting from my own experimentation, observation or specimen-collecting.

ACKNOWLEDGEMENTS

This thesis would not have been possible without advice, stimulation and encouragement from many people.

I have had considerable help in making this thesis a reality. I would like to express my sincere gratitude to Drs. Budi Suprapto, MBA. Ph.D., my advisor : effort and insight have been a continuous source of the inspiration in this study.

I would also like to state my special appreciations to Prof.Ir.Suyoto, M.Sc, Ph.D. Ph.D and Mahestu Noviandra Krisjanti, M.Sc. IB, PhD for their kindly comments and useful suggestions during the implementation process of this study.

Morover, My overwhelming thanks to them that I'm able to encourage myself to achieve more than what i can imagined : to publish it in the international journal confidently.

Sincere thanks are extend to all of my friends who help me collecting the data. Most importantly, I would like to take this opportunity to express my deep appreciation and gratitude go to all of my beloved family members and my girlfriend whose support and for encouragement helped me through this Master Degree.

Any mistake which probably happened here, unavoidably, I in the position of the researcher was the only one who has accepted that.

ABSTRACT

The rapid development of technologies leads massive change in the way people live including how people manage transaction. In results, Many service providers in many countries start to offer mobile wallet with various benefits. The mobile suica in Japan can be referred as one of the most successful implementation. Even though there are many mobile wallet offered by services providers in Indonesia, statistic showed that only 1% of total transaction were made using mobile wallet. Hence, a study is needed to understanding consumer behaviour toward mobile wallet adoption.

To collect data, Questionnaires were distributed through both online and offline channel using convenience sampling method. 523 data from Y Generation were collected between first week of October and First week of November 2016. 17 out 523 were indentified as invalid data during data screening process, hence, only 506 data were used in data analysis. Majority of respondents already have knowledge of mobile wallet, although only half of the respondents have use experience with the mobile wallet. T-Cash was the most popular mobile wallet product in Indonesia, following by Go-Pay.

SmartPLS 3.0 was used to analyze the data using. First, the assessment of measurement model was conducted to ensure the validity and reliability, followed by the assessment of structural model to test the research hypothesis, as well as model fit, predictive relevance, and effect size of each latent variables. This study found that trust is the most important factor to affect individual's intention to use mobile wallet, followed by Habit, Social Influence, Facilitating Conditions, Trialability, and Price Value. In Contrast, factors such as Performance Expectancy, Effort Expectancy, Awareness, Network Externalities, and Hedonic Motivation were insignificant. The model proposed could explain 61% variance toward behavioral intention. The result can be utilitez by service providers to formulate better strategies.

Keywords: mobile wallet, mobile payment, technology acceptance, technology adoption, partial least square, UTAUT2, Indonesia
