

BAB 6

KESIMPULAN

6.1. Kesimpulan

Pendekatan RE untuk pembuatan Pola Kemasan di CV. AMK dalam penelitian ini berhasil dilakukan dengan baik, sehingga diperoleh 3D CAD model *fix*, 3D RP model cangklong, dan 3D RP pola kemasan sesuai dengan model fisik.

Waktu pembuatan pola kemasan dengan pendekatan RE terbukti lebih cepat dibandingkan metode manual (berkurang dari ± 6 hari menjadi ± 3 hari).

Hasil penelitian ini dapat digunakan bagi industri kecil menengah di Indonesia apabila ingin meningkatkan efisiensi produksi dengan menggunakan integrasi teknologi ini.

6.2. Saran

Perlu adanya pengabdian/penelitian antara mahasiswa dan dosen dengan industri kecil menengah di Indonesia untuk menciptakan kolaborasi teknologi ini sehingga proses produksi menjadi lebih efisien.
