

BAB VI

KESIMPULAN DAN SARAN

6.1. Kesimpulan

Berdasarkan hasil penelitian mengenai Pengaruh *Superplasticizer* Terhadap Beton Memadat Mandiri dengan Serat Serabut Kelapa ini, dapat ditarik kesimpulan seperti tercantum di bawah ini.

1. Berdasarkan hasil pengujian karakteristik beton segar dengan variasi kadar *superplasticizer* dengan metode *Slump flow*, *T₅₀₀ slump flow*, dan *L-shaped box*, semua variasi sampel menunjukkan bahwa beton serat serabut kelapa dengan penambahan *superplasticizer* memenuhi syarat karakteristik beton segar SCC yaitu *filling ability*, *passing ability*, dan *viscosity*.
2. Nilai kuat tekan beton normal tanpa *superplasticizer* dan beton normal dengan variasi kadar *superplasticizer* sebesar 1,5%, 2%, dan 2,5% dari berat semen pada umur 14 hari secara berturut-turut adalah 30,29 MPa, 30,34 MPa, 34,16 MPa, dan 44,85 MPa. Penambahan variasi kadar *superplasticizer* sebesar 1,5%, 2%, dan 2,5% dari berat semen dengan umur 14 hari pada beton normal menaikkan kuat tekan berturut-turut sebesar 0,17%, 12,78%, dan 48,07% dibandingkan dengan beton normal tanpa *superplasticizer*.
3. Nilai kuat tekan beton normal tanpa *superplasticizer* dan beton normal dengan variasi kadar *superplasticizer* sebesar 1,5%, 2%, dan 2,5% dari berat semen pada umur 28 hari secara berturut-turut adalah 34,46 MPa, 36,80 MPa, 49,15 MPa, dan 54,41 MPa. Penambahan variasi kadar *superplasticizer* sebesar 1,5%, 2%, dan 2,5% dari berat semen dengan umur 28 hari pada beton

normal menaikkan kuat tekan berturut-turut sebesar 6,79%, 42,63%, dan 57,89% dibandingkan dengan beton normal tanpa *superplasticizer*.

4. Nilai kuat tarik belah beton normal tanpa *superplasticizer* dan beton normal dengan variasi kadar *superplasticizer* sebesar 1,5%, 2%, dan 2,5% dari berat semen pada umur 14 hari secara berturut-turut adalah 2,46 MPa, 2,88 MPa, 3,05 MPa, dan 3,26 MPa. Penambahan variasi kadar *superplasticizer* sebesar 1,5%, 2%, dan 2,5% dari berat semen dengan umur 14 hari pada beton normal menaikkan kuat tarik belah berturut-turut sebesar 17,07%, 23,98%, dan 32,52% dibandingkan dengan beton normal tanpa *superplasticizer*.
5. Nilai kuat tarik belah beton normal tanpa *superplasticizer* dan beton normal dengan variasi kadar *superplasticizer* sebesar 1,5%, 2%, dan 2,5% dari berat semen pada umur 28 hari secara berturut-turut adalah 2,62 MPa, 3,39 MPa, 3,48 MPa, dan 3,51 MPa. Penambahan variasi kadar *superplasticizer* sebesar 1,5%, 2%, dan 2,5% dari berat semen dengan umur 28 hari pada beton normal menaikkan kuat tarik belah berturut-turut sebesar 29,39%, 32,82%, dan 33,97% dibandingkan dengan beton normal tanpa *superplasticizer*.
6. Dari hasil penelitian yang didapat, nilai modulus elastisitas rata-rata yang paling tinggi terdapat pada beton dengan kode BS 2,5, yaitu 26684,739 MPa pada umur 14 hari dan 30578,019 MPa pada umur 28 hari. Sedangkan nilai modulus elastisitas terendah pada umur 14 hari adalah beton dengan kode BS 1,5, yaitu 25166,980 MPa dan pada umur 28 hari adalah beton dengan kode BN, yaitu 27644,190 MPa. Nilai modulus elastisitas sangat dipengaruhi oleh kuat tekan beton yang didapat. Semakin tinggi nilai kuat tekan beton, maka

semakin tinggi pula nilai modulus elastisitas yang didapat dan demikian pula sebaliknya.

7. Variasi kadar *superplasticizer* yang paling optimal pada penelitian ini adalah dengan penambahan 2,5% *superplasticizer* dari berat semen. Hal ini terbukti dengan terpenuhinya karakteristik *Self-Compacting Concrete* (SCC) dan peningkatan terbesar pada kuat tekan, kuat tarik belah, dan modulus elastisitas dari beton normal tanpa *superplasticizer*.

6.2. Saran

Saran yang dapat penulis berikan setelah melihat hasil penelitian ini adalah seperti tercantum di bawah ini.

1. Perlu dilakukan penelitian lebih lanjut mengenai sifat beton serat serabut kelapa dengan karakteristik SCC (*Self Compacting Concrete*) terhadap ketahanan segregasi agar parameter beton segar ini menjadi lebih lengkap.
2. Perlu dilakukan penelitian lebih lanjut dengan menggunakan agregat kasar dengan ukuran butir maksimum ≤ 10 mm agar mengetahui perbedaan terhadap karakteristik SCC dengan ukuran butir maksimum ≤ 20 mm.
3. Dapat dilakukan penelitian lebih lanjut tentang penggunaan kadar *superplasticizer* diatas 2,5% agar mengetahui range kadar yang optimum yang lebih rinci.
4. Dalam proses pencampuran bahan campuran beton yang digunakan perlu ketelitian agar bahan yang digunakan tidak ada yang terbuang.
5. Pentingnya mengetahui cara penggunaan alat uji beton segar SCC agar selama proses pengambilan data menjadi lebih lancar.

A. PENGUJIAN BAHAN

A.1 PENGUJIAN KANDUNGAN LUMPUR AGREGAT HALUS

- I. Waktu Pemeriksaan : 26 Oktober 2017
- II. Bahan
 - a. Pasir Kering Tungku, asal: Kali Progo, berat : 100,00 gram
 - b. Air Jernih, asal : LSBB Prodi TS FT - UAJY
- III. Alat
 - a. Gelas Ukur, ukuran : 250 cc
 - b. Timbangan
 - c. Tungku (oven), suhu antara $105 - 110^{\circ}\text{C}$
- IV. Pasir + Piring Masuk Tungku
- V. Hasil
Pasir + Piring Keluar Tungku
 - a. Berat Pasir : 99,56 gramKandungan Lumpur :
$$\frac{100,00 - 99,56}{100,00} \times 100\% = 0,44\%$$

Kesimpulan : Kandungan lumpur $0,44\% < 5\%$, maka syarat terpenuhi (**OK**).

A.2 PENGUJIAN KANDUNGAN ZAT ORGANIK AGREGAT HALUS

I. Waktu Pemeriksaan : 26 Oktober 2017

II. Bahan

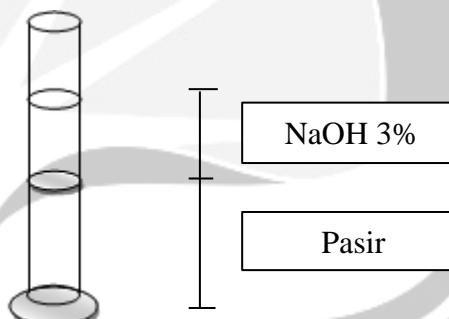

a. Pasir Kering Tungku, asal : Kali Progo

b. Larutan NaOH 3%

III. Alat

a. Gelas Ukur, ukuran : 250 cc

IV. Sketsa

V. Hasil

Setelah didiamkan selama 24 jam, warna larutan di atas pasir sesuai dengan *Gardner Standart Colour*.

Kesimpulan : Warna *Gardner Standart Colour* No. 11, maka dapat disimpulkan pasir tersebut kurang baik digunakan.

A.3 PENGUJIAN BERAT JENIS DAN PENYERAPAN AGREGAT HALUS

- I. Waktu Pemeriksaan : 11 Oktober 2017
II. Bahan : Pasir
III. Asal : Kali Progo
IV. Lokasi Pengujian : Laboratorium Struktur dan Bahan Bangunan (LSBB), Jurusan Teknik Sipil, Universitas Atma Jaya, Yogyakarta

Pengujian Berat Jenis & Penyerapan Agregat Halus

Berat Awal (V)	500	gr
Berat Kering Oven (A)	493,39	gr
Jumlah Air Masuk Sebelum Digoncang	320	ml
Jumlah Air Masuk Sesudah Digoncang	6	ml
Jumlah Air Total yang Digunakan (W)	326	ml

Berat Jenis Bulk	2,836	gr/cm ³
Berat Jenis SSD	2,870	gr/cm ³
Berat Jenis Semu (Apparent)	2,948	gr/cm ³
Penyerapan (Absorption)	1,339	%

$$\text{Berat Jenis Agregat Halus} = \frac{2,836 + 2,948}{2} = 2,892 \text{ gr/cm}^3$$

A.4 PENGUJIAN ANALISIS SARINGAN AGREGAT HALUS

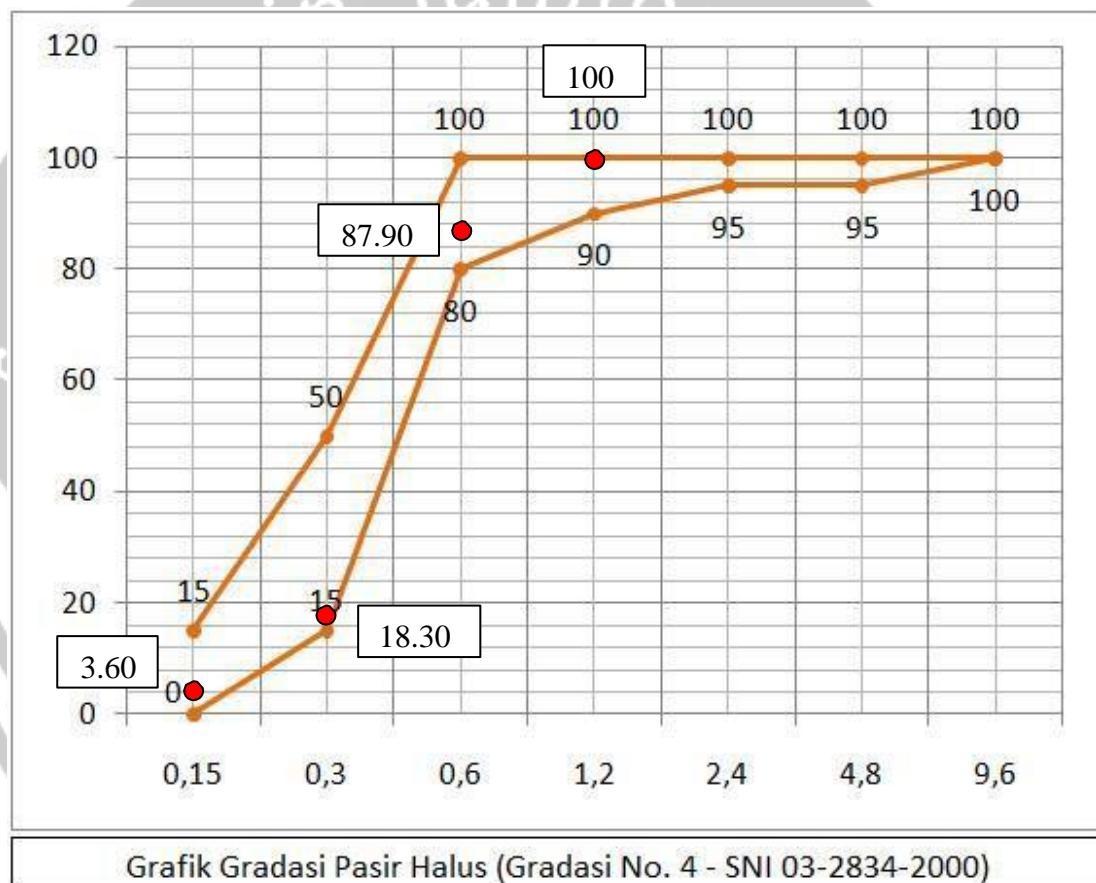

- I. Waktu Pemeriksaan : 24 Oktober 2017
- II. Bahan : Pasir
- III. Asal : Kali Progo
- IV. Lokasi Pengujian : Laboratorium Struktur dan Bahan Bangunan (LSBB), Jurusan Teknik Sipil, Universitas Atma Jaya, Yogyakarta.

Ayakan	Berat Saringan	Berat Saringan + Pasir	Berat Pasir	Kumulatif	% Tertahan	% Lolos
3/8" (9,52mm)	456	456	0	0	0	100,00
No.4(4,75 mm)	508	508	0	0	0	100,00
No.8(2,36 mm)	330	330	121	0	0	100,00
No.30(0,60mm)	292	413	696	121	12,1	87,90
No.50(0,30mm)	374	1070	147	817	81,7	18,30
No.100(0,15mm)	286	433	0	964	96,4	3,60
Pan	371	407	36	1000	100	0,00

Kesimpulan : Dari data diatas maka didapat nilai MHB (Modulus Halus Butir) sebesar 2,902. Berdasarkan SK SNI S-04-1989-F (Spesifikasi Bahan Bangunan Bagian A), maka nilai MHB agregat halus tersebut memenuhi syarat karena berada pada kisaran 1,50 – 3,80 (OK).

Berdasarkan data analisis saringan tersebut, maka dapat ditentukan untuk daerah golongan pasirnya. Untuk menentukan pasir tersebut termasuk di golongan pasir berapa, dapat dilihat pada grafik di bawah ini.

Setelah angka % lolos saringan dimasukkan ke dalam grafik di atas, maka dapat disimpulkan bahwa agregat halus tersebut termasuk ke dalam pasir golongan 4. Penentuan golongan pasir ini digunakan untuk perencanaan *mix design*.

B. RENCANA ADUKAN BETON (*MIX DESIGN*)
(SNI 03-2834-2000)

I. Data Bahan

1. Bahan agregat halus (pasir) : Kali Progo, Yogyakarta
2. Bahan agregat kasar (*split*) : Clereng, Yogyakarta
3. Jenis semen : PPC Gresik

II. Hitungan

1. Kuat tekan beton yang direncanakan (f'_c) pada umur 28 hari.
 $f'_c = 25 \text{ MPa}$.
2. Menentukan nilai deviasi standar berdasarkan tingkat mutu pengendalian pelaksanaan campuran.
3. Berdasarkan SNI, nilai *margin* ditentukan sebesar 12 Mpa karena benda uji yang kurang dari 15 buah.
4. Menetapkan kuat tekan beton rata-rata yang direncanakan berdasarkan SNI.

$$f'_c = 25 \text{ MPa} + M = 25 + 12 = 37 \text{ MPa}.$$

5. Menentukan jenis semen

Jenis semen PPC dengan merek Gresik

6. Menetapkan jenis agregat

- a. Agregat halus : Pasir alam (Golongan 4)
- b. Agregat kasar : Batu pecah

7. Menetukan faktor air semen, berdasarkan jenis semen yang dipakai dan kuat tekan rata-rata silinder beton yang direncanakan pada umur tertentu. Direncanakan sebesar 0.45.
8. Menetapkan faktor air semen maksimum

Persyaratan Jumlah Semen Minimum dan Faktor Air Semen Maksimum Untuk Berbagai Macam Pembetonan dalam Lingkungan Khusus

Lokasi	Jumlah Semen minimum Per m ³ beton (kg)	Nilai Faktor Air Semen Maksimum
Beton di dalam ruang bangunan :		
a. Keadaan keliling non-korosif	275	0,6
b. Keadaan keliling korosif disebabkan oleh kondensasi atau uap korosif	325	0,52
Beton diluar ruangan bangunan :		
a. tidak terlindung dari hujan dan terik matahari langsung	325	0,60
b. terlindung dari hujan dan terik matahari langsung	275	0,60
Beton masuk kedalam tanah :		
a. mengalami keadaan basah dan kering berganti-ganti	325	0,55
b. mendapat pengaruh sulfat dan alkali dari tanah		Lihat Tabel 5
Beton yang kontinu berhubungan:		
a. Air tawar		Lihat Tabel 6
b. Air laut		

(Sumber : SNI 03-2834-2000 : Tabel 4)

Berdasarkan tabel 4 SNI 03-2834-2000, untuk beton dalam ruang bangunan sekeliling non-korosif fas maksimum 0,6. Dibandingkan dengan No.7, dipakai terkecil. Jadi digunakan fas 0,45.

9. Menetapkan nilai *Slump*, direncanakan sebesar 60-180 mm.
10. Ukuran butiran maksimum (krikil) adalah 20 mm.

11. Menetapkan jumlah air yang diperlukan tiap m^3 beton.

- Ukuran butir maksimum 20 mm.
- Nilai *Slump* 60-180 mm.
- Agregat halus berupa batu tak di pecah, maka
 $W_h = 195$ liter
- Agregat kasar berupa batu pecah, maka
 $W_k = 225$ liter

$$W = \frac{2}{3} W_h + \frac{1}{3} W_k$$

Dengan :

W_h adalah perkiraan jumlah air untuk agregat halus

W_k adalah perkiraan jumlah air untuk agregat kasar

$$W = \frac{2}{3} 195 + \frac{1}{3} 225 = 205 \text{ liter}/m^3$$

12. Menghitung berat semen yang diperlukan :

- Berdasarkan tabel 4 SNI 03-2834-2000, diperoleh semen minimum 275 kg.

- Berdasarkan $fas = 0,45$.

$$\begin{aligned} \text{Semen per } m^3 \text{ beton} &= \frac{\text{air}}{\text{fas}} = \frac{205}{0,45} \\ &= 455,556 \text{ kg} \end{aligned}$$

Dipilih berat semen paling besar. Digunakan berat semen 455,556 kg.

13. Penyesuaian jumlah air atau fas.

$$fas \text{ rencana} = 0,45$$

fas mak > fas rencana

$0,6 > 0,45 \dots\dots\dots$ Ok!

14. Perbandingan agregat halus dan kasar.

- a. Ukuran maksimum 20 mm.
- b. Nilai *Slump* 60 mm – 180 mm
- c. *fas* 0,45.
- d. Jenis gradasi pasir no. 4.

Diambil proporsi pasir = 50%.

15. Berat jenis agregat campuran

$$= \frac{P}{100} \text{ BJ Agregat Halus} + \frac{K}{100} \text{ BJ Agregat Kasar}$$

$$= \frac{50}{100} \times 2,892 + \frac{50}{100} \times 2,656$$

$$= 2,774$$

Dimana :

P = % agregat halus terhadap agregat campuran

K = % agregat kasar terhadap agregat campuran

16. Berat jenis beton, diperoleh hasil 2425 kg/m^3

17. Berat agregat campuran

$$= \text{berat tiap } m^3 - \text{keperluan air dan semen}$$

$$= 2425 - (205 + 455,556)$$

$$= 1764,444 \text{ kg/m}^3$$

18. Menghitung berat agregat halus

Berat agregat halus = % berat agregat halus x keperluan agregat

campuran

$$= \frac{50}{100} \times 1764,444 \text{ kg/m}^3 = 882,222 \text{ kg/m}^3$$

19. Menghitung berat agregat kasar

Berat agregat kasar = % berat agregat kasar x keperluan agregat

campuran

$$= \frac{50}{100} \times 1764,444 \text{ kg/m}^3 = 882,222 \text{ kg/m}^3$$

Proporsi Campuran Adukan Beton untuk Setiap Variasi per 1 m³

Kode	Semen (kg)	Pasir (kg)	Split (kg)	Serat (kg)	Air (liter)	SP (liter)
BN	455,56	882,22	882,22	4,56	205	0
BS 1,5	455,56	882,22	882,22	4,56	205	6,83

C. HASIL PENGUJIAN BENDA UJI

C.1 PENGUJIAN KUAT TEKAN SILINDER BETON

Kode	Umur Beton	No	Berat	Dimensi		Berat Volume	Beban Maks	Kuat Tekan	Rata-rata (MPa)	
			Hari	Kg	D (cm)	T (cm)	Kg/m ³	KN		
BN	14	1	12.94	12.94	15.155	29.750	2411.27	480	26.61	30.29
		2	13.18	13.18	15.181	29.842	2440.04	540	29.83	
		3	13.54	13.54	15.021	29.859	2558.91	610	34.42	
		4	13.62	13.62	15.533	30.410	2363.52	410	21.64*	
	28	1	13.50	13.50	15.342	30.163	2421.06	625	33.81	34.46
		2	12.86	12.86	15.088	30.133	2386.96	605	33.84	
		3	12.92	12.92	15.126	30.064	2391.54	530	29.49*	
		4	13.64	13.64	15.448	30.240	2406.57	670	35.75	

Contoh Perhitungan : Kode BN

1. Berat Volume

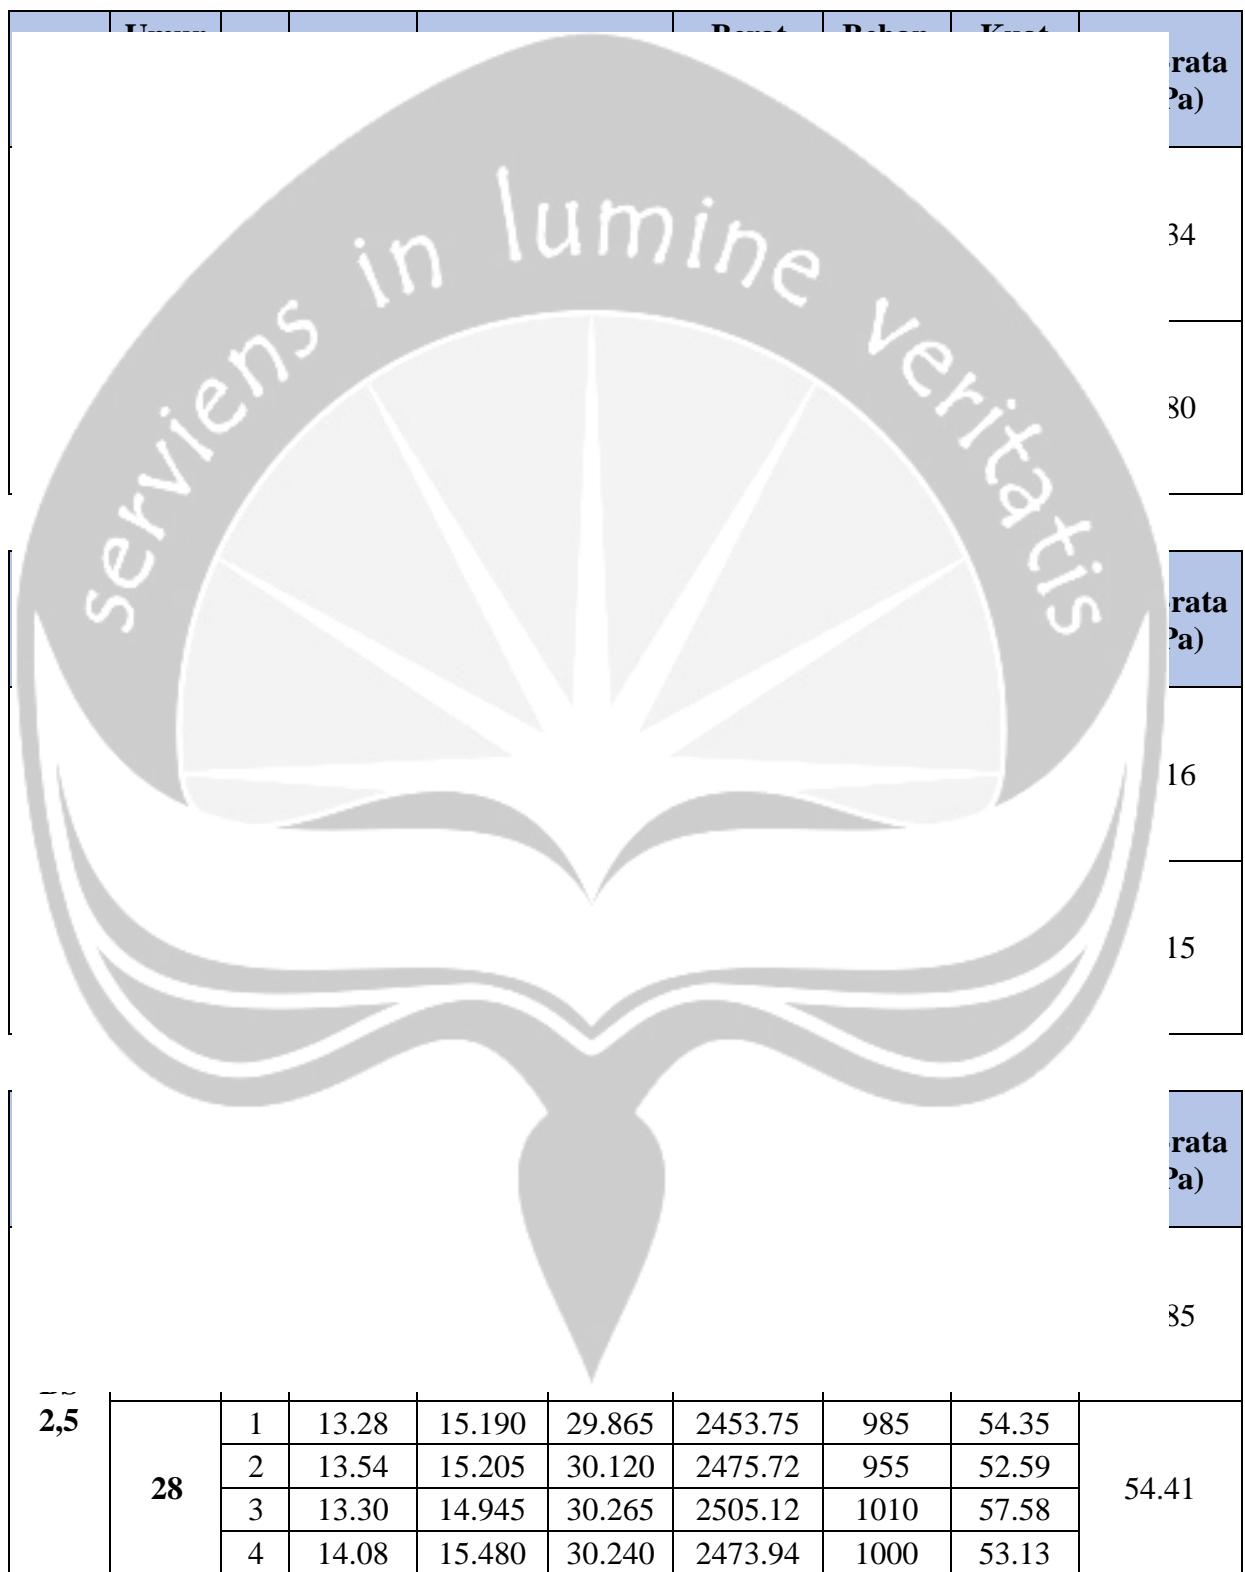

$$\begin{aligned} &= 12.94 / (0.25 \times \pi \times 0.15155^2 \times 0.2975) \\ &= 2411.27 \text{ Kg/m}^3 \end{aligned}$$

2. Kuat Tekan

$$\begin{aligned} &= 480 \times 1000 / (0.25 \times \pi \times 151.55^2) \\ &= 26.61 \text{ MPa} \end{aligned}$$

PRODUCT DATA SHEET

Sika® ViscoCrete®-1003

CONCRETE ADMIXTURE FOR HIGH FLOW / SELF-COMPACTING CONCRETE

DESCRIPTION

Sika® ViscoCrete®-1003 is a third generation superplasticiser for concrete and mortar. It is particularly developed for the production of high flow concrete with exceptional flow retention properties and significant reduction in bleeding and segregation.

USES

Sika® ViscoCrete®-1003 facilitates extreme water reduction, excellent flowability with optimal cohesion and strong self-compacting behaviour.

Sika® ViscoCrete®-1003 is used for the following types of concrete:

- High flow concrete
- Self-compacting concrete (S.C.C.)
- Concrete with very high water reduction (up to 30 %)
- High strength concrete
- Concrete in hot weather and with extended transportation and workability requirements etc.

The combination of high water reduction, excellent flowability and high early strength provides clear benefits in the above mentioned applications.

CHARACTERISTICS / ADVANTAGES

Sika® ViscoCrete®-1003 acts by surface adsorption on the cement particles producing a sterical separation effect. Concrete produced with Sika® ViscoCrete®-1003 exhibits the following properties:

- Excellent flowability (resulting in highly reduced placing and compacting efforts)
- Strong self-compacting behaviour
- Extremely high water reduction (resulting in high density and strengths)
- Improved shrinkage and creep behaviour
- Increased carbonation resistance of the concrete
- Improved finish
- Reduce tendency to bleeding and segregation

Sika® ViscoCrete®-1003 does not contain chlorides or other ingredients which promotes steel corrosion. Therefore, it may be used without restriction for reinforced and pre-stressed concrete construction.

Sika® ViscoCrete®-1003 gives the concrete extended workability and depending on the mix design and the quality of materials used, self-compacting properties can be maintained for more than 1 hour at 30°C.

PRODUCT INFORMATION

Chemical Base	Aqueous solution of modified polycarboxylate copolymers
Packaging	200 liters drums and bulk deliveries
Appearance / Colour	Brownish
Shelf Life	12 months from the date of production when stored in original unopened packaging
Storage Conditions	in a cool, dry place
Density	1.065 ± 0.01 kg/l

PRODUCT DATA SHEET
Sika® ViscoCrete®-1003
August 2016
021301011000001463

Specific Advice

With the use of Sika® Viscocrete®-1003, concrete of the highest quality is produced. The standard rules of good concreting practice (production as well as placing) must also be observed with Sika® Viscocrete®-1003 concrete.

Fresh concrete must be cured properly.

APPLICATION INFORMATION

Recommended Dosage	For soft plastic concrete For flowing and self compacting concrete (S.C.C.)	0.2 - 0.6% by weight of binder 0.6 - 1.6% by weight of binder
Compatibility	Sika® Viscocrete®-1003 may be combined with the following products: <ul style="list-style-type: none">▪ Plastiment VZ▪ SikaFume▪ SikaAER▪ Sika Control <p>Pre-trials are recommended if combinations with the above products are required. Please consult our Technical Service Department. To produce flowing and/or self-compacting concrete, special concrete mix design is required. Pre-trials are mandatory. Please consult our Technical Service Department.</p>	

APPLICATION INSTRUCTIONS

DISPENSING

Sika® Viscocrete®-1003 is added to the gauging water or simultaneously poured with it into the concrete mixer. For optimum utilisation of its high water reduction property, we recommend thorough mixing at a minimal wet mixing time of 60 seconds.

The addition of the remaining gauging water (to fine tune concrete consistency) may only be started after two-thirds of the wet mixing time, to avoid surplus water in the concrete.

BASIS OF PRODUCT DATA

All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

LOCAL RESTRICTIONS

Please note that as a result of specific local regulations the declared data and recommended uses for this product may vary from country to country. Please consult the local Product Data Sheet for the exact product data and uses

ECOLOGY, HEALTH AND SAFETY

For information and advice on the safe handling, storage and disposal of chemical products, users shall refer to the most recent Safety Data Sheet (SDS) containing physical, ecological, toxicological and other safety-related data.

LEGAL NOTES

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika's recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product's suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.
