## DECLARATION OF ORIGINALITY

Name: Teofilo Jose Nurratri Soares.....

Student Number : 08 1313112 .....

Title : **THE INFLUENCE OF HIGH DENSITY POLYETHYLENE TO CHARACTERISTIC OF HOT ROLLED SHEET** .....

**I confirm that final project is my own work and that I have:**

Read and understood the guidance on plagiarism in the Student Handbook, including the University of Atma Jaya Yogyakarta on Plagiarism

Clearly referenced, in both the text and the bibliography or references, all sources used in the work

Fully referenced and used inverted commas for all text quoted from books, journals, web etc.

Provided the sources for all tables, figures, data etc. that are not my own work

Not made use of the work of any other student(s) past or present without acknowledgement.

Not sought or used the services of any professional agencies to produce this work

In addition, I understand that any false claim in respect of this work will result in disciplinary action in accordance with University regulations

### DECLARATION:

I am aware of and understand the University's policy on plagiarism and I certify that this final project is my own work, except where indicated by referencing, and that I have followed the good academic practices noted above

Signed.....

*Teofilo Jose*

## **ACKNOWLEDGEMENT**

First and foremost, the author would like to thanks to God for His blessing that had been given to the author, since preparation process from proposal seminar, laboratory work until the author could finish this final project report.

### **“THE INFLUENCE OF HIGH DENSITY POLYETHYLENE TO CHARACTERISTIC OF HOT ROLLED SHEET.”**

This report was arranged, due to finish the S1 degree at Faculty of Engineering, Department of Civil Engineering, Atma Jaya University Yogyakarta. This final project report is written based on the research in the laboratory of transportation Atma Jaya University Yogyakarta. During the research, there are a lot of help, advice, and support from various parties. Because of all of this, the author would like to say thank you for:

1. Dr.Ir.AM. Ade Lisantono, M.Eng, as dean of Engineering Faculty, University of Atma Jaya Yogyakarta.
2. J. JanuarSudjati, ST, MT, as the head of Civil Engineering Program in the University of Atma Jaya Yogyakarta.
3. Ir. Yohannes Lulie, M.Eng, as the coordinator of International Civil Engineering Program in the University of Atma Jaya Yogyakarta.
4. Ir. P. Eliza Purnamasari, M.Eng as advisor which always give great advice and guidance during final project.
5. Ir. JF. Soandrijanie Linggo, M.T. as Head of Transportation Laboratory which always give advice and knowledge during the laboratory work.

6. Mr. L. Beny Antana which teach me how to use laboratory tools and always provide help for author, Thank you very much.
7. All lecturers in Civil International Program which always support author to finish this final project report.
8. PT SURADI SEJAHTERA which provide asphalt for this research
9. Author's parent which always give me full support for finishing final project. Thank you for pray, bless, and the advice.
10. Author's family, Mbaik, kak Uvi ,Makris, kak Eya, Mba Ana, Adave, Neo which always fully support me to finish the project.
11. Clementine Marchella as a lovely girlfriend which always there give me a pray and supportive advice, also for her beloved mother Mrs. Anna that help to fix the report, Thank you very much.
12. Dodol, Inno, Viktor, Cukong, Ryan, Martin, Hastu, Hatem, Heru, Pasca, Leo, Wahyu, as friend which support to help me to do laboratory work.
13. My classmate friend, Rio, Ryan, Valent, and Deo. Thank you very much.
14. Mr. Wiko and other civil international's student. Thank you for help and support me.

The author realized that this report has many mistake, misspelling, etc. For that, the author will accept all of the critics and suggestion which will make the author better. Finally, the author hopes, this report could give any advantages for the readers.

Yogyakarta, April 2013

Teofilo Jose N.S.

**ABSTRACT**

**THE INFLUENCE OF HIGH DENSITY POLYETHYLENE TO  
CHARACTERISTIC OF HOT ROLLED SHEET**

Teofilo Jose Nurratri Soares

International Civil Engineering Student, Faculty of Engineering, University of  
Atma Jaya Yogyakarta/08 13 13112

Hot Rolled Sheet (HRS) is a kind of pavement mix design that consist of aggregate, asphalt, and filler. The materials were hotmixed and compacted in specific temperature. The use of additive material was expected to improve the characteristic of asphalt mix design that is shown by Marshall Test. High density polyethylene (HDPE) was polymer that has thermoplastic characteristic which is similar with the characteristic of asphalt. The purpose of this research is to know whenever HDPE can be added into, also it is expected that HDPE may improve the mixture.

In this research the use of HDPE waste in the mixtures was 0%, 3%, 5%, 7% and 9%. Asphalt content was 5%, 5.5%, 6%, 6.5%, and 7%. Analysis is based on the references, especially regulation that published by BinaMarga (2010). The result of research, show HDPE content 3% and 5 two samples for each proportion of HDPE, therefore, there are 50 samples in total.

The result of this research is that HDPE can be use as additive in HRS WC with content 3% and 5%. The optimum asphalt content is 6.8%. The additions of HDPE also increase several Marshall Parameters such as stability value, VITM value and MQ value. However, HDPE decrease flow, VFWA, and density value of the mixture.

**Keywords:** HRS, HDPE, Marshall Parameters, optimum asphalt content, additive
