

CHAPTER V

CONCLUSION AND RECOMMENDATION

5.1. Conclusion

Concerning about data analysis and the results in the chapter IV, the answer of the initial objectives of the study are as following:

1. The first research objectives is to identify preferences of car ownership (car and non-car owners) towards the available and imminent transportation mode for shopping purpose in Jakarta. The data analysis portrayed different preferences of the two groups. The car owners give higher rating for car usage rather than the non-car owners for 31 out of 38 questions they are; No. 3 and 8 in Table 4.11, as well as No. 1, 4, 6, 13, and 23 in Table 4.12. Meanwhile, the low rating of preference both car and non-car owners regarding to suitability of aged parents, elderly people, and children using public transportation is in line with amount of walking required. Moreover, respondents appear missing the enjoyment of travel by walking, along with low rating on protection from pollutant, weather, security from crime during day and night have been influentially shaping the preference of car and non-car owner responding to public transportation including MRT. This conclude that both car and non-car owners still have high desire and willing to use private transportation for shopping trip travel, especially with elderly people and children.

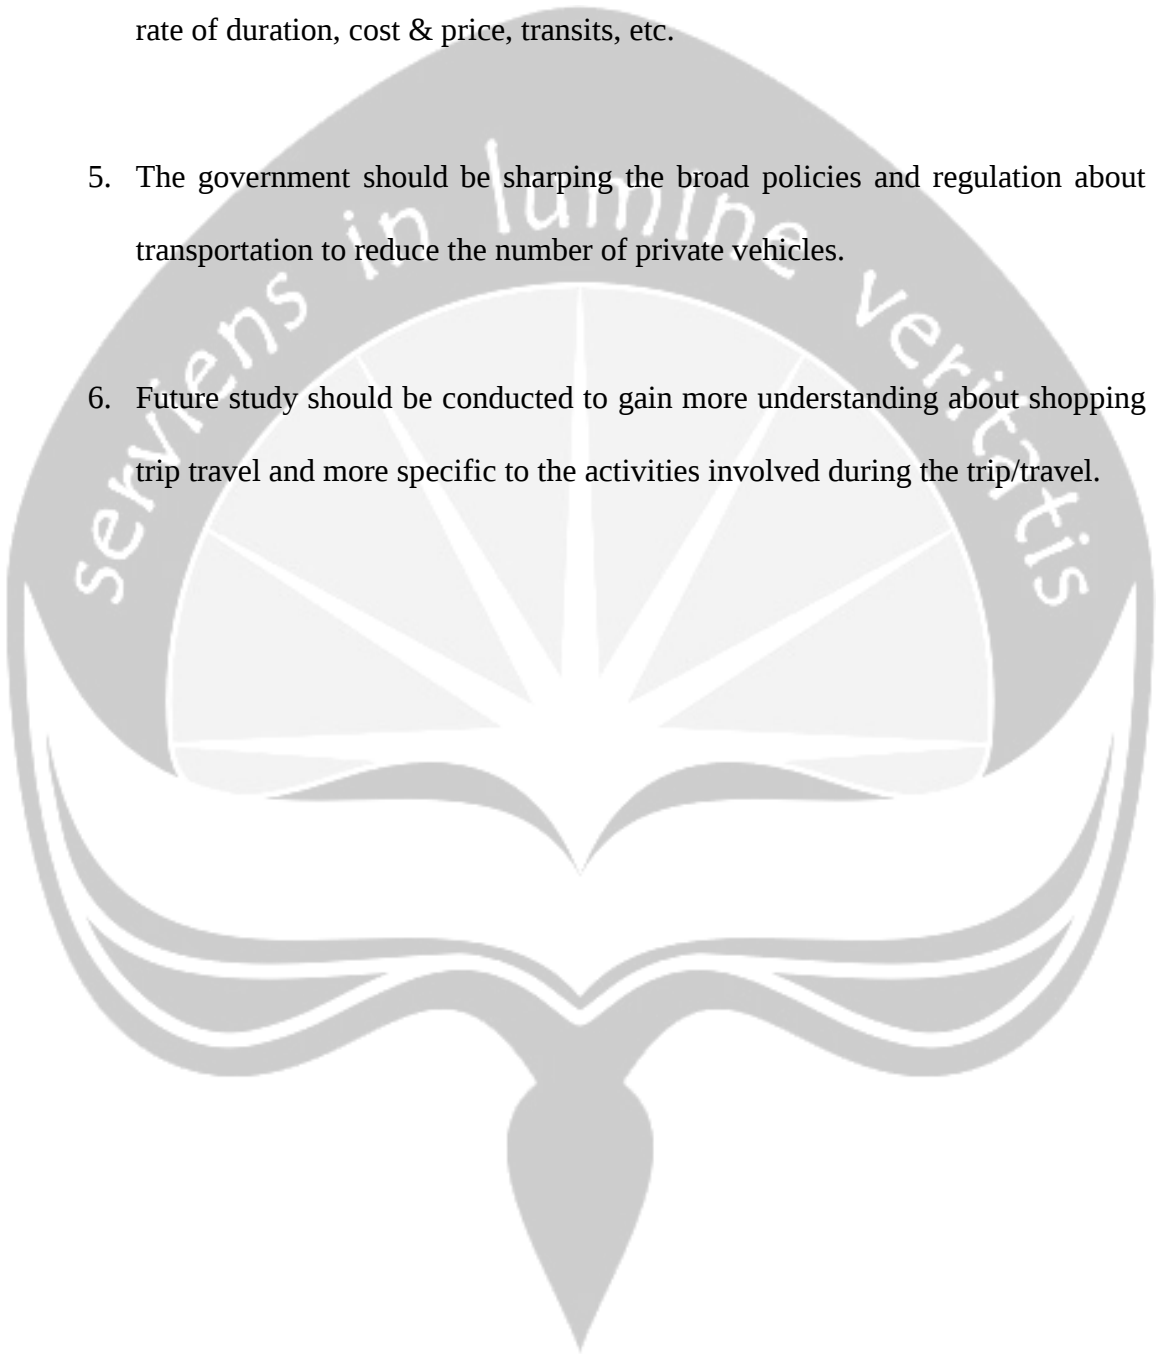

2. The second research objectives is to identify the environmental awareness of car ownership. In the table of result display the significant different of car and non-car owners towards environment awareness. The non-car owners appeared mindful to environment where they give low rating on car corresponding to environmentally friendly transport mode. On the other hand, the car owner does not seem to aware about this issue, where car is still the first option which offers lot of the advantages.

5.2. Recommendation

According to the result of the research and the conclusion above, several recommendations can be obtained:

1. For imminent transport modes that will be operated commercially, there is room for improvement of facility regarding to surrounding pedestrian street to encourage people to use public transportation, such as by providing direct access to shopping center, designing walking routes away from the traffic, etc.
2. Increase the safety along pedestrian street and public transport hub should be concerned to receive good security and safety to decrease the potential crime during travel.
3. Socialize more about transportation mode to reform/reconstruct the perception towards public transportation and awareness to environment.

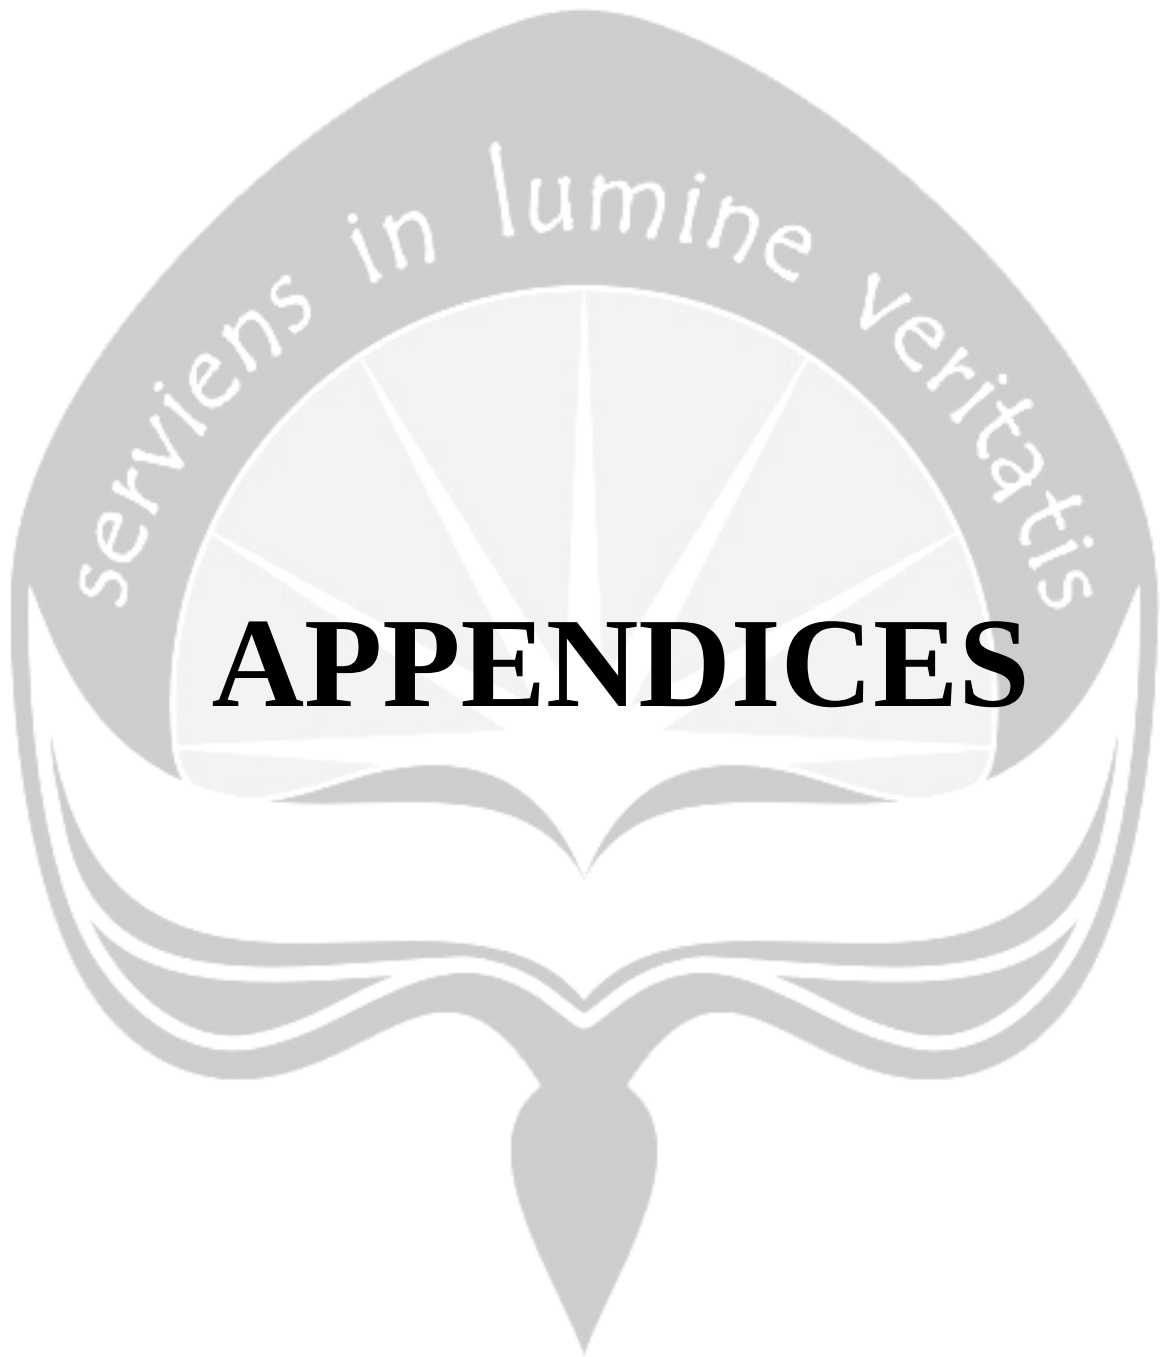

4. Starting up an application that integrates every transport mode such as online transport with public transportation with optional range from lowest to highest rate of duration, cost & price, transits, etc.
5. The government should be sharpening the broad policies and regulation about transportation to reduce the number of private vehicles.
6. Future study should be conducted to gain more understanding about shopping trip travel and more specific to the activities involved during the trip/travel.
