

BAB V KESIMPULAN

5.1 Kesimpulan

Berdasarkan hasil dari analisis dan pembahasan pemanfaatan material habis pakai *non consumable material* pekerjaan konstruksi dua lantai di Provinsi Daerah Istimewa Yogyakarta pada bab sebelumnya maka kesimpulan yang dapat diambil dalam penelitian ini adalah sebagai berikut:

1. Penggunaan bekisting konvensional dengan penggunaan bekisting *knock down* memiliki perbedaan dalam segi volume sisa yang dihasilkan. Pada pengujian yang dilakukan menggunakan uji *Independent Samples Test* menunjukkan hasil perbedaan yang signifikan. Penggunaan bekisting konvensional menghasilkan volume sisa bekisting sebesar $0 - \leq 10\%$ dan sedikit pula yang menghasilkan volume sisa $10\% - 20\%$, sedangkan pada penggunaan bekisting *knock down* menghasilkan volume sisa potongan rata – rata sebesar $20\% - 30\%$. Penggunaan bekisting *knock down* menghasilkan volume sisa yang lebih besar.
2. Nilai anggaran struktur yang menggunakan bekisting *knock down* lebih tinggi dibandingkan nilai anggaran struktur yang menggunakan bekisting konvensional. Penggunaan bekisting *knock down* rata – rata membutuhkan anggaran sebesar 42.52% dari bobot nilai struktur, sedangkan bekisting konvensional membutuhkan anggaran sebesar 38.55% dari bobot nilai struktur.

3. Pada pekerjaan konstruksi dua lantai menunjukkan hasil sisa potongan material habis pakai bekisting terbesar terletak pada struktur balok. Analisa tersebut didapatkan dari perbandingan olah data hasil responden dengan hasil data studi kasus yang telah diuji menggunakan Uji *Independent Samples Test* yang menunjukkan tidak ada perbedaan yang signifikan. Hasil dari responden menunjukkan sisa potongan balok menghasilkan sisa potongan sebesar 41% dan pada hasil studi kasus menunjukkan potongan balok menghasilkan sisa potongan sebesar 47%.
4. Jumlah pemakaian bekisting dilihat dari segi perencanaan anggaran biaya memiliki pengaruh terhadap terhadap nilai anggaran yang dibutuhkan. Setelah diuji menggunakan uji *One-Way Anova* dan *Independent Samples Test* tidak menunjukkan perbedaan yang signifikan, tetapi melalui nilai rata – rata yang diapat dari hasil analisis pemakaian bekisting kolom dan balok sebanyak satu kali akan menghasilkan nilai anggaran yang lebih besar jika dibandingkan dengan pemakaian bekisting tersebut sebanyak dua kali.
5. Hasil *waste level* pada material multiplex menunjukkan hasil kolom 5.82%, pada balok sebesar 19.19%, dan pada plat lantai sebesar 6.63%. Struktur balok menunjukkan hasil *waste level* terbesar dibanding struktur lainnya pada studi kasus bangunan Balai Nikah dan Manasik Haji KUA Depok.
6. Hasil *waste level* pada material usuk menunjukkan hasil kolom 4.06%, pada balok sebesar 4.53%, pada plat lantai sebesar 10.10%. Struktur plat lantai menunjukkan hasil *waste level* terbesar dibanding struktur lainnya pada studi kasus bangunan Balai Nikah dan Manasik Haji KUA Depok.

5.2 Saran

Adapun saran – saran yang disampaikan berdasarkan hasil penelitian dan analisa selama melakukan pengumpulan data pada proyek – proyek konstruksi di Yogyakarta adalah sebagai berikut:

1. Bagi penyedia jasa, penggunaan pemodelan gambar potongan bekisting yang dilakukan sebelum pelaksanaan proyek konstruksi dapat menghemat material multiplex atau usuk.
2. Bagi pengguna jasa, dapat menentukan jumlah pemakaian bekisting pada awal perencanaan sesuai referensi pada penelitian diatas sehingga biaya yang dibutuhkan dapat lebih sedikit murah.
3. Bagi peneliti lain yang ingin mengembangkan penelitian ini diharapkan dapat memperbanyak proyek yang dijadikan studi kasus sehingga hasil yang didapat lebih baik dan mendekati dengan kondisi proyek pada umumnya.
4. Bagi peneliti lain dapat mengembangkan model perhitungan bekisting secara manual kearah pengembangan aplikasi guna memberikan manfaat lebih kepada pengguna.
5. Bagi peneliti lain dapat mengembangkan penelitian ini dengan membuat formula yang praktis dalam perhitungan material bekisting dan sisa material yang dihasilkan.
