

## BAB VI

### KESIMPULAN DAN SARAN

#### 6.1 Kesimpulan

Berdasarkan hasil pengujian yang telah dilakukan diatas maka dapat disimpulkan beberapa hal sebagai berikut :

- a) Pengembangan program untuk melakukan proses magnifikasi pada citra digital dengan menggunakan metode *bicubic basis spline* berbasis paralel berhasil dilakukan.
- b) Kualitas citra yang dihasilkan dengan menggunakan metode *bicubic basis spline* dapat mengurangi kabur dan bayangan serta efek kotak-kotak.
- c) Program yang dikembangkan secara paralel dengan GPU CUDA menggunakan metode *bicubic basis spline* dapat mempercepat proses magnifikasi hingga 20 kali lebih cepat dan pada metode *bilinear* dapat mempercepat hingga 23 kali lebih cepat serta pada metode *nearest neighbor* dapat mempercepat hingga 51 kali lebih cepat dibandingkan proses magnifikasi secara serial dengan CPU pada masing-masing metode.

#### 6.2 Saran

Penelitian pada proses magnifikasi citra ini masih dapat dikembangkan lagi menjadi lebih baik, berikut saran dari penulis untuk pembangunan program magnifikasi citra kedepannya :

- a) Program dapat memanfaatkan fitur CUDA yang lain seperti *texture memory*, *shared memory* dan lainnya sesuai perkembangan library CUDA kedepan yang tentunya dapat mengoptimalkan waktu menjadi lebih cepat.
- b) Program dapat dibuat lebih menarik dengan menambahkan GUI sehingga dapat mempermudah dalam pengoperasiannya.
