

BAB VI

PENUTUP

6.1 Simpulan

Berdasarkan penelitian yang sudah dilakukan dapat ditarik simpulan sebagai berikut:

1. Membangun *dataset* yang tepat dapat dilakukan dengan cara mengumpulkan korpus yang berisi kalimat dengan variasi kata yang beragam, penggunaan gaya bahasa yang natural, jumlah kalimat / kata yang banyak, serta dilakukannya proses anotasi label dengan benar. Kemudian *dataset* juga harus disesuaikan formatnya dengan format yang dapat dikonsumsi oleh *spacy* yaitu *JSON* atau *JSONL*.
2. Pembuatan model *dependency parser* dan *named entity recognition* dapat menggunakan *script* yang sudah disediakan oleh *Spacy* ataupun melalui perintah *CLI spacy*. Dalam pembuatan model, *Spacy* membutuhkan *dataset* untuk proses pelatihan dan evaluasi yang terlebih dulu sudah diberi label/diantoasi dan disesuaikan formatnya.
3. Evaluasi model dapat dilakukan dengan menghitung akurasi atau *f1score*. Perhitungan dapat memanfaatkan perintah *CLI* bawaan *spacy* dan juga menggunakan perhitungan manual, jumlah prediksi yang benar dibagi dengan jumlah data yang diprediksi.

6.2 Saran

Berdasarkan penelitian yang sudah dilakukan diharapkan dimasa mendatang dapat dilakukan penyempurnaan kemampuan model sesuai dengan *library spacy*. Penyempurnaan model dapat dilakukan dengan menambahkan *pipeline* yang belum ada di dalam model ini seperti *text categorizer*. Selain itu penyempurnaan akurasi model juga dapat dilakukan dengan menambah jumlah *dataset* untuk proses pelatihan model. Keberagaman kata dan kalimat juga dapat mempengaruhi tingkat akurasi model.
