

## **BAB VI**

### **PENUTUP**

#### **6.1. Kesimpulan**

Dari penelitian ini dapat disimpulkan bahwa potensi pemanfaatan air hujan yang di Kompleks Karitas Nandan adalah sebagai berikut:

- Volume rata-rata air hujan yang bisa ditampung dalam periode satu tahun sebesar  $4427 \text{ m}^3$  atau  $12.13 \text{ m}^3$  dalam satu hari berdasar perhitungan curah hujan andalan.
- Desain bangunan (*reservoir*) PAH yang akan dibuat pada Kompleks Karitas Nandan dipilih untuk dapat menampung air untuk kebutuhan tiga hari.
- Kebutuhan rata-rata harian adalah sebesar adalah sebesar  $20.68 \text{ m}^3$  setiap hari atau  $62.04 \text{ m}^3$  dalam tiga hari.
- Total dimensi *reservoir* PAH yang akan dibangun pada Kompleks Karitas sebesar  $54 \text{ m}^3$  yang terbagi menjadi 6 bangunan PAH dengan kapasitas masing-masing sebesar  $9 \text{ m}^3$  yang tersebar di empat unit karya pelayanan.
- Perencanaan bangunan PAH sesuai dengan unit karya pelayanan terbagi dalam empat unit karya pelayanan yaitu Rehabilitasi Narkoba Kunci, TK Karitas, SD Karitas dan SMP Karitas.
- Biaya total investasi pembangunan *reservoir* PAH dan talang lengkap dengan sarana lain seperti: pipa, kran, sambungan dan aksesoris lainnya sebesar Rp 108,011,550.96 dengan lama investasi selama 23,2 tahun.

- Pemanfaatan air hujan memiliki beberapa keuntungan, yaitu keuntungan finansial dimana mengurangi biaya listrik untuk pompa air dan keuntungan lain dari segi lingkungan adalah dengan hujan sebagai sumber daya air maka pemanfaatan air hujan ini dapat memberi nilai tambah terhadap upaya konservasi sumber daya air.

## 6.2. Saran

Dari hasil penelitian yang telah dilakukan penulis menyarankan perlunya beberapa perhatian berhubungan dengan masalah pemanfaatan air hujan sebagai kebutuhan air bersih pada Kompleks Karitas Nandan, antara lain:

- Untuk pemanfaatan air hujan sebagai air minum perlu diperhatikan proses penyaringan yang memenuhi standar kesehatan.
- Melakukan pembersihan rutin terhadap material bak penyaringan dan bak penampungan air hujan agar terhindar dari kotoran dan lumut yang mengganggu kesehatan penggunanya.
- Melakukan pembersihan rutin terhadap genting sebagai media tangkap air hujan dan pemotongan pohon yang menyebabkan kotoran pada atap bangunan sebagai media tangkap air hujan.
- Melakukan konsultasi lebih lanjut kepada pihak pengelolah lahan dan *owner* berhubungan dengan letak dan dimensi bangunan PAH baru yang akan dibuat buat.
- Membuat sumur resapan tambahan untuk mengurangi limpasan permukaan dan untuk *recharging* atau persediaan air tanah.
