#### **BAB VI**

# **KESIMPULAN DAN SARAN**

# 6.1 Kesimpulan

Berdasarkan analisis simpang bersinyal Jalan Kelapa Dua – Jalan Hamadi Pante menggunakan MKJI 1997, maka dapat ditarik kesimpulan sebagai berikut :

- 1. Panjang antrian yang terjadi di simpang tiga bersinyal Jalan Kelapa Dua Jalan Hamadi Pante Minggu (16/08/2020) pukul 13.00 14.00 WIT untuk masing-masing pendekat adalah pendekat timur laut 44 m, pendekat selatan 73 m, pendekat barat daya 165 m. Derajat kejenuhan tertinggi yang terjadi pada simpang tiga bersinyal Jalan Kelapa Dua Jalan Hamadi Pante berada pada pendekat barat daya sebesar 1,09 dengan indeks tingkat pelayanan yaitu F. Berdasarkan data tersebut dapat disimpulkan bahwa tingkat pelayanan pada simpang bersinyal Jalan Kelapa Dua Jalan Hamadi Pante kurang layak dalam menampung arus lalu lintas yang terjadi khususnya pada waktu puncak.
- Solusi penanganan untuk kinerja simpang bersinyal Jalan Kelapa Dua Jalan Hamadi Pante denan diberikan 3 alternatif yaitu :
  - a. Alternatif perubahan waktu hijau, didapat hasil perhitungan derajat kejenuhan yang terjadi pada simpang tiga bersinyal Jalan Kelapa Dua Jalan Hamadi Pante Minggu (16/08/2020) pukul 13.00 14.00 WIT setelah diberikan alternatif perubahan waktu hijau untuk tiap pendekat timur laut, selatan, dan barat daya yaitu 0,8, 0,82, 0,82.
  - b. Alternatif pelebaran jalan, pelebaran masing-masing pendekat 2 m diambil dari bahu jalan. Didapat hasil perhitungan derajat kejenuhan Minggu

(16/08/2020) pukul 13.00 – 14.00 WIT setelah diberikan alternatif pelebaran jalan untuk tiap pendekat timur laut, selatan, dan barat daya yaitu 0,59, 0,6, 0,87.

c. Alternatif pelebaran jalan disertai alternatif perubahan waktu hijau, didapat hasil perhitungan derajat kejenuhan yang terjadi pada simpang tiga bersinyal Jalan Kelapa Dua – Jalan Hamadi Pante Minggu (16/08/2020) pukul 13.00 – 14.00 WIT setelah diberikan alternatif pelebaran jalan disertai alternative perubahan waktu hijau untuk tiap pendekat timur laut, selatan, dan barat daya yaitu 0,63, 0,65, 0,66.

Dari hasil perhitungan 3 alternatif diatas menunjukkan ada perubahan derajat kejenuhan pada masing-masing pendekat, namun alternatif terbaik adalah alternatif pelebaran jalan disertai alternatif perubahan waktu sinyal karena derajat kejenuhan nya tidak melebihi nilai yang diterima MKJI 1997 yaitu 0,75.

### 6.2 Saran

Berdasarkan hasil kesimpulan di atas maka saran – saran yang dapat disampaikan penulis setelah melakukan peneltian analisis simpang bersinyal sebagai berikut.

- 1. Perlu melakukan penambahan lebar jalan untuk masing-masing pendekat.
- Perlu adanya perubahan waktu hijau pada lampu lalu lintas khususnya pada pendekat barat daya.
