

CHAPTER V

CONCLUSIONS AND RECOMMENDATIONS

5.1. Conclusions

According to the analysis of Retrofitted column using RC Jacketing wrapped by CFRP, it can be concluded as follows:

- Seismic Non-Linear analysis conducted from Seismobuild program show that the RC Jacketing wrapped by CFRP is a great solution for solving the space problem of restaurant building without losing a lot of space from the retrofitting by using the minimum thickness of concrete jacket with the support of CFRP wrap. Restaurant in Indonesia will need a lot of space to hold more customers and utilities.
- RC jacketing wrapped by CFRP is making a better performance of the structure to withstand a 50-year seismic load based on ASCE 41-17. Crowded place like restaurant building are designed using a low occupancy according to the code. In Indonesia, some of the buildings are not designed with detailed seismic calculation. This research prove that the existing building analyzed by the non-linear software will have a problem of some structural member. The research might save a lot of life in the crowded area such as restaurant from structural failure by providing the detailed analysis and know the problem for the structure to be solved.
- RC Jacketing wrapped by CFRP is increasing the capacity of each column member to withstand the overall critical element check by the Seismobuild program. Average Increasing capacity of each targeted building performances levels are:

Moment chord:

$$IO = 14,9\% \quad CP = 17,45\% \quad LS = 18,61\%$$

Shear force:

$$IO = 93,98\% \quad CP = 95,11\% \quad LS = 103,13\%$$

5.2. Recommendations

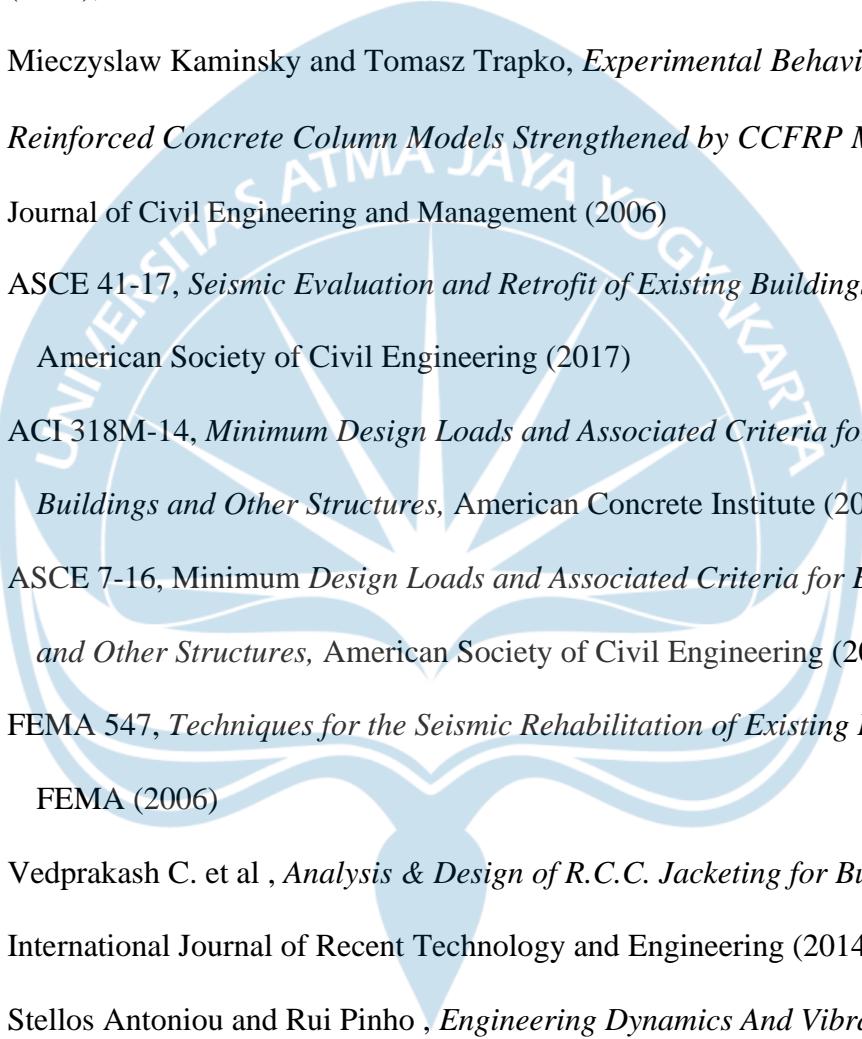

Based on this research, several recommendations can be given such as:

- Only a few of retrofitting paper in Indonesia about RC Jacketing plus CFRP on the existing structure. This paper can be served as a guidance or a start for further research or innovation for contractor to improve the performance of existing buildings. Designer should take account for non-linear analysis to design the retrofitting to prevent the failure from designing based only from “their experience” because only a few people could operate and understand the non-linear program in Indonesia.
