

CHAPTER V

CONCLUSION

5.1 Conclusions

From data analysis in the previous chapter, some conclusion discovers.

Those conclusions are:

1. Causal relationship of Service Quality and Word of mouth communication is fully mediated by Customer Satisfaction of *Margo Murah Baru*.
2. Purchasing Value does not support the causal relationship between service quality to word of mouth, service quality to customer satisfaction either between customer satisfaction to word of mouth.
3. Men are giving judgment on variables and its dimensions observed better than women.
4. Customer who bought furniture more than 4 million rupiahs feel *Margo Murah Baru* is more reliable for them, compare to those who bought furniture less than 1 million rupiahs in the store.
5. Customer who lived more than 5 kilometers from store feel *Margo Murah Baru* employee's empathy is better than customer who lived less than 5 kilometers from store.

5.2 Suggestions

5.2.1 Suggestions on Advance Research

This research only measure few matters on company's behavior to customer and also consumer behavior in buying furniture products. Hence, there are some advices regarding on the next research:

1. This research is using mediation and moderation analysis. Would be better if in the next research using mediation and moderation to analyze other variables, such as mediation of marketing stimuli, store image, and moderation of customer's age, occupation, etc.
2. This research is only conducted into 8 branches of *Margo Murah Baru*. The advance research can be performed to another furniture store or other kind of store, since the marketing policy of each store is applied differently.

5.2.1 Suggestion to the managerial implications

From the research conducted, there are good responses for marketing policy in *Margo Murah Baru*, however there still few advice which needs attention and improvement. Those advices are:

1. Customer Satisfaction play important mediation role on the relationship between service quality and word of mouth communication of *Margo Murah Baru*'s customer, thus needs to customer satisfaction is important to fulfill.
2. From service quality dimensions observed, dimensions of empathy has strongest role in the relationship between service quality and word of mouth communication. *Margo Murah Baru* should make improvements on empathy, especially on employees of *Margo Murah Baru* giving attention in personal to customers or personalize the customers. Personalize here can be: say hello to customer with their name, recognizing their taste in furniture, listen to customer's problem, gives surprises on their birthday.

- 
3. *Margo Murah Baru* does not need separate attitude in service quality and its dimensions regarding to customer's purchasing value in store, because those dimensions effective whether customer spend more money or just fewer money in store.
 4. *Margo Murah Baru* needs to improve the attitude on the subject of service quality and its dimensions, especially in reliability and empathy. Women customers in *Margo Murah Baru* feel less reliable on the store compare to men. Thus *Margo Murah Baru* had to improve on its professionalism and its on-time job.

Margo Murah Baru also had to improve their empathy on customer who lives less than 5 kilometers from store. Since customer live near the store, they had same attitude from employees, like offering product proper to their taste, give bonuses according to the needs (example: student desk for those who has kids).
