

CHAPTER V

CONCLUSION

5.1 Conclusion

Based on the results of data analysis to see the effect of ESG disclosure on Firm Value in energy sector companies listed on the IDX in 2019-2023, it was concluded that ESG disclosure has a negative effect on Firm Value. This is because the effect of sustainable actions on market performance is more significant within the long term. So, investors tend to consider the effects of high costs which will reduce financial performance within the short term. As a result, investors' interest in contributing decreases, which eventually has the potential to result in decreased demand within the market which will influence firm value.

5.2 Limitation

Some of the limitations in this study include the following:

1. Measurement of the independent variable, namely ESG disclosure, tends to be subjective. This is because the measurement of the variable is carried out using a checklist in the form of scoring the information disclosed based on the GRI aspects. However, not all information about environmental, social, and governance is clearly disclosed and in accordance with the checklist in the company's annual report and sustainability report.

2. Measurement of the dependent variable, namely the firm value, uses the stock market price on the publication date of the annual report or sustainability report. However, there are companies with publication dates of annual reports or sustainability reports that are not found on the company's website or the IDX website, so that these companies cannot be used as observations because measurements cannot be made on the dependent variable.

5.3 Suggestion

Based on the research results, the researcher provides suggestions to further researchers who will conduct research on similar topics to conduct further research using other indicators in variables such as ESG scores or ESG index. Because there are still several other factors outside the research variables that affect company value. Further researchers can also add other dependent variables in the formulation of research on ESG disclosure other than Tobins' Q to get better results.
