

BAB V

PENUTUP

5.1. Kesimpulan

Berdasarkan hasil penelitian yang telah dilakukan maka pada bab lima ini penulis mengambil kesimpulan hasil penelitian yaitu sebagai berikut:

1. Terdapat 3 *cluster* yang terbentuk dalam proses klasifikasi konsumen Warung Burjo. Segmen 1 (*Follower*) berisi responden yang tidak menunjukkan dominasi/indikator yang menonjol. Segmen 2 (*Price-oriented*) terdiri dari konsumen yang mempertimbangkan indikator harga dalam proses pembelian. Segmen 3 (*Promotion-oriented*) lebih mengutamakan indikator promosi dalam keputusan pembelian.
2. Profil pelanggan Warung Burjo, yang ditunjukkan dengan karakteristik yang sama pada ketiga *cluster* hasil tabulasi silang, yaitu : berjenis kelamin laki-laki, usia 18-24 tahun, berdomisili diluar ketiga wilayah penelitian (Babarsari, Kledokan, Tambak Bayan), dengan pendidikan terakhir SMA dan pekerjaan pelajar/mahasiswa serta pendapatan/uang saku antara Rp.500.001 – Rp. 1.000.000.
3. Berdasarkan hasil analisis *cluster* yang dilakukan dengan menggunakan elemen bauran pemasaran (4P) atribut-atribut yang diinginkan oleh konsumen Warung Burjo secara umum adalah Warung Burjo yang memiliki variasi harga dan menu makanan dan minuman yang banyak, porsi makan yang besar, memberikan fasilitas koran, musik maupun TV, penjual Warung Burjo yang rapi, dan sigap dalam memberikan pelayanan

secara sopan dan ramah, kondisi Warung Burjo yang bersih dengan produk dan alat makan yang kebersihannya terjamin.

5.2. Implikasi Manajerial

Implikasi manajerial yang dapat diambil dari hasil penelitian mengenai segmentasi konsumen Warung Burjo adalah sebagai berikut:

1. Hasil penelitian ini nantinya dapat digunakan oleh pebisnis yang kiranya ingin membuka sebuah usaha tempat makan atau pun sekarang sedang menjalankan bisnis tempat makan, dapat menggunakan hasil segmentasi ini untuk mengenal pasar lebih jauh dengan karakteristik-karakteristik yang tersaji dari hasil segmentasi penelitian ini.
2. Penelitian ini menggunakan indikator-indikator dari bauran pemasaran (4P) dengan indikator yang sudah jelas ini, dengan demikian pengguna dari hasil penelitian ini langsung dapat menggunakan hasilnya secara langsung berdasarkan keinginan dari konsumen. Indikator yang menonjol dari penelitian ini adalah konsumen yang menginginkan variasi harga dan menu makanan yang banyak, porsi yang besar, memberikan fasilitas pendukung, pelayanan yang sigap, rapi dan ramah.

5.3. Kelemahan Penelitian

Penelitian ini memiliki keterbatasan karena karakteristik dari responden yang kurang beragam. Metode pencarian data hanya menggunakan kuesioner, sehingga hasil yang didapatkan atau jawaban yang didapatkan terbatas dan kurang beragam.

5.4. Saran

Mengacu hasil penelitian di atas penulis memberikan beberapa saran pada peneliti selanjutnya, sebagai berikut:

1. Peneliti yang tertarik tentang segmentasi pasar ini diharapkan untuk meneliti obyek atau tempat usaha lain.
2. Peneliti selanjutnya dapat mencoba metode *clustering* yang lainnya.
3. Peneliti selanjutnya diharapkan tidak hanya menggunakan metode kuesioner untuk memperoleh data melainkan juga menggunakan wawancara/*deep interview* supaya didapatkan alternatif jawaban yang lebih beragam.
4. Pada hasil temuan, segmen 1 (*follower*) memiliki jumlah responden kedua terbanyak. Jika pengusaha warung burjo ingin menjaring konsumen dari segmen ini, pengusaha warung burjo perlu melakukan sebuah inovasi dengan cara misalnya dengan merangkul komunitas, karena responden dalam kelompok ini merupakan konsumen yang keputusan pembeliannya dipengaruhi oleh orang lain. .
5. Segmen 2 (*price-oriented*), dengan jumlah responden terbanyak, pengusaha warung burjo diharapkan memberikan variasi harga yang lebih beragam terhadap produk yang dijual, karena pada segmen ini konsumen sangat mengutamakan harga dalam pengambilan keputusan pembelian.
6. Pada segmen 3 (*promotion-oriented*), pengusaha perlu melakukan inovasi yang mampu menjaring konsumen dari segmen ini, misalnya dengan cara memberikan fasilitas *wi-fi*, nonton bareng, serta meningkatkan keramahan dari penjual.

The F tests should be used only for descriptive purposes because the clusters have been chosen to maximize the differences among cases in different clusters. The observed significance levels are not corrected for this and thus cannot be interpreted as tests of the hypothesis that the cluster means are equal.

The F tests should be used only for descriptive purposes because the clusters have been chosen to maximize the differences among cases in different clusters. The observed significance levels are not corrected for this and thus cannot be interpreted as tests of the hypothesis that the cluster means are equal.

Pooled within-groups correlations between discriminating variables and standardized canonical discriminant functions

Variables ordered by absolute size of correlation within function.

*. Largest absolute correlation between each variable and any discriminant function

a. This variable not used in the analysis.

** . Misclassified case

a. Cross validation is done only for those cases in the analysis. In cross validation, each case is classified by the functions derived from all cases other than that case.
