

CHAPTER V

CONCLUSION

5.1 Conclusion

Liquidity research findings and statements varies with various people across the globe. Pastor and Stambaugh (2003) measure of U.S. stock market liquidity by following the impact of volume traded and price changes. In one of their earlier studies, Amihud and Mendelson (1986) measured the link between market liquidity and stock market returns. Chordia, Sarbar, and Subrahmanyam (2002) find that volatility of aggregate liquidity in the U.S. Affects bonds and stocks and that it is correlated with monetary policy. Bortolotti et al. (2004) argue that liquidity is the fundamental aspect of stock market development.

The objective of this research is to help us examine and to analyze the variables of the stock market gathered from their historical data with its relationship to liquidity, its comparative form or relative measure of liquidity, and the level of the excess stock return.

The scope of this research study is the companies that were always listed in the LQ45 from 2002 until 2012 using daily historical price data. This research result gives many controversial results, whereas the results are somewhat puzzling and different than other researches in similar study. In this study, The result of data analysis that has been done shows that:

1. SIZE does affect excess stock returns.
2. Book value of equity to the market value of equity has no effect on excess stock returns.
3. Stock turnover rate has no effect on excess stock returns.
4. Coefficient of variation of turnover has no effect on excess stock returns.
5. Price has no effect on the variable of excess stock returns.
6. Relative measure of liquidity (RML) has no effect on excess stock returns.
7. Variation of the relative measure of liquidity does not have any effect on excess stock returns.

5.2 Research Limitations

This study has a couple of limitations items, namely:

1. This study has limitations those variables that affect excess stock returns only size. Future studies may add other variables that affect the stock excess returns.
2. This research was conducted only at the companies always listed in LQ 45 years from 2002 to 2012.

5.3 Future Research Suggestion

This research is far from perfect, so if anyone wants to this or similar type of research, there are some things that they need to take heed, they are:

1. Use other types of index, IHSG for example. And try not to put the category of “Always in index A” for different results. By taking another sample hopefully it will yield more accurate, better results and give contribution to this area of study.
2. Taking more time series data to make the analysis better. With the usage of more time series data hopefully it will give results that are more comprehensive and more precise than before. In that it will contribute further to increase the level of competence in the particular discipline served.

APPENDIX III
CLASSICAL ASSUMPTION

Normality Tests

One-Sample Kolmogorov-Smirnov Test

		Unstandardized Residual
N		77
Normal Parameters ^{a,b}	Mean	.0000000
	Std. Deviation	.10468867
Most Extreme Differences	Absolute	.316
	Positive	.285
	Negative	-.316
Kolmogorov-Smirnov Z		2.773
Asymp. Sig. (2-tailed)		.000

a. Test distribution is Normal.

b. Calculated from data.

Normality Tests

One-Sample Kolmogorov-Smirnov Test

		Unstandardized Residual
N		56
Normal Parameters ^{a,b}	Mean	.0000000
	Std. Deviation	.02428907
Most Extreme Differences	Absolute	.138
	Positive	.079
	Negative	-.138
Kolmogorov-Smirnov Z		1.029
Asymp. Sig. (2-tailed)		.240

a. Test distribution is Normal.

b. Calculated from data.

Multicollinearity Test

Variables Entered/Removed^a

Model	Variables Entered	Variables Removed	Method
1	CVRML, PRICE, TURN, BM, STDRML, SIZE, CVTURN, RML, STDTURN ^a	.	Enter

- a. All requested variables entered.
b. Dependent Variable: Excess Stock Returns

Coefficients^a

Model		Collinearity Statistics	
		Tolerance	VIF
1	SIZE	.211	4.750
	BM	.365	2.741
	TURN	.027	37.173
	STDTURN	.020	48.973
	CVTURN	.181	5.532
	PRICE	.794	1.260
	RML	.031	32.179
	STDRML	.029	34.787
	CVRML	.226	4.426

- a. Dependent Variable: Excess Stock Returns

Multicollinearity Test

Variables Entered/Removed^a

Model	Variables Entered	Variables Removed	Method
1	CVRML, TURN, PRICE, BM, RML, CVTURN, SIZE	.	Enter

- a. All requested variables entered.
b. Dependent Variable: Excess Stock Returns

Coefficients^a

Model		Collinearity Statistics	
		Tolerance	VIF
1	SIZE	.216	4.630
	BM	.366	2.730
	TURN	.330	3.031
	CVTURN	.258	3.869
	PRICE	.752	1.330
	RML	.271	3.688
	CVRML	.208	4.813

- a. Dependent Variable: Excess Stock Returns

Heteroscedasticity Test

Variables Entered/Removed^b

Model	Variables Entered	Variables Removed	Method
1	CVRML, TURN, PRICE, BM, RML, CVTURN, SIZE ^a	.	Enter

a. All requested variables entered.

b. Dependent Variable: abs

Model Summary

Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	.394 ^a	.155	.014	.01374

a. Predictors: (Constant), CVRML, TURN, PRICE, BM, RML, CVTURN, SIZE

ANOVA^b

Model		Sum of Squares	df	Mean Square	F	Sig.
1	Regression	.001	7	.000	1.102	.379 ^a
	Residual	.008	42	.000		
	Total	.009	49			

a. Predictors: (Constant), CVRML, TURN, PRICE, BM, RML, CVTURN, SIZE

b. Dependent Variable: abs

Coefficients^a
