

CHAPTER V

CONCLUSIONS AND SUGGESTIONS

5.1 Research Conclusions

The objective of this research is to test whether companies engage in income decreasing earnings management during global financial crisis or not. This study uses data on a sample of 154 manufacturing companies listed on the Indonesia Stock Exchange 2008-2009 period and meets the criteria.

This research used Modified Jones model to determine earnings management and one sample t-test (one-tailed test) to test the hypothesis. Results of analysis of the study show that hypothesis null is accepted. It means that companies do not engage in income decreasing earnings management during global financial crisis 2008-2009. It could happen because companies have several motivations and considerations in earnings management.

5.2 Research Limitations

This research has limitation, which is short period of observations and limited samples. This research only observed earnings management in 2008-2009 due to the crisis only occurred in that period. So, the period of observations can not be extended. Besides that, Modified Jones model, which is being used in this research, is best used for manufacturing companies.

Therefore, this research only used the samples from manufacturing companies.

5.3 Suggestion for Future Research

Suggestion that could be given for future research is to combine with the other crises events. Here, the meaning of combine is by using several crises events as sample, for instance Asian financial crisis in 1998 and Persian Gulf crisis. So, a research about earnings management can be conducted by comparing earnings management during Asian financial crisis, Persian Gulf crisis, and global financial crisis 2008-2009. As long as the data is available and freely accessible, future research about the other crises can be conducted.

Therefore, in the future, researcher can use several crises events together and combine them in his/her research for better understanding of earnings management during financial crisis (but it depends on the availability of the data).
